Steele-Waseca board of directors approve retirement of \$1 million in capital credit equity

The Steele-Waseca Cooperative Electric board of directors during their regular October meeting approved the retirement of \$1 million in capital credit equity allocated during 1988, 1989 and 2015, along with the estate settlements in 2016.

All current and former member-owners who received electric service from Steele-Waseca during those years listed above are eligible for the refund.

For convenience and to save on check processing and mailing costs, current member-owners eligible for this year's refund will have the amount of their equity applied as a credit on their Steele-Waseca bill received next month (December 2016).

All former member-owners eligible for a refund will have their equity mailed to them by check.

Capital credit equity comes from the cooperative's margins or profits. The co-op's margin each year is determined by subtracting operating expenses from the total amount of money collected during the year.

Your equity is reserved for you, even if you move away from the area. That's why it is important for you to make sure Steele-Waseca always has your current address and phone number.

Until it's refunded to members, the equity is used to finance new construction and system improvements.

Did You Know?

Electric cooperatives have retired \$13.8 billion to members since 1988 — \$1 billion in 2015 alone. Because electric co-ops operate at cost, any excess revenues, called margins, are allocated and retired to members in the form of capital credits.

Using members' equity helps Steele-Waseca provide electric service at a lower cost than if all construction funds were borrowed from other resources.

Steele-Waseca Cooperative Electric is accepting bids to lease 16 acres of tillable land exclusively for farming purposes. The lease would begin April 1, 2017, and terminate March 31, 2020. Rents shall be payable on April 1 of each year. Steele-Waseca Cooperative Electric reserves the right to reject all bids. If interested in receiving a bid request form, please email Debbie at: deby@swce.coop or phone Debbie at 507-446-4207 or 800-526-3514. Bids must be received at Steele-Waseca Cooperative Electric, 2411 W. Bridge St., Owatonna, MN 55060 by 3:30 p.m., Dec. 16, 2016.

\$2 OFF

INSTANTLY on all ENERGY STAR® qualified Philips LED holiday string sets at participating Target® stores. Discount taken at register. Visit EnergyWiseMN.com for store locations. Offer valid Dec. 4-17, 2016.

By Syd Briggs,
 General Manager

As reported on the front page of this month's Sparks newsletter, the board of directors approved the retirement of \$1 million in capital credit equity allocated in 1988, 1989, 2015, and the estate settlements in 2016.

I am pleased to report this increase is over \$230,000 more than the amount refunded in 2015. Our average retirement, or refund, over the past 10 years has been \$629,090 which makes this year's refund \$370,910 more than the average, and the largest retirement in Steele-Waseca Cooperative Electric's 80-year history.

One of our cooperative principles is the value of financial participation. It is great to be part of a cooperative that is able to return a significant portion of that participation each year.

Every year Steele-Waseca receives questions from our members regarding capital credit equity. For those who are new to a cooperative or not familiar on how capital credit equity works, keep in mind that when you signed up to receive electric service from Steele-Waseca, you became a member of an electric co-op.

With investor-owned utilities returning a portion of any profits back to their shareholders, electric co-ops operate on an at-cost basis. This means Steele-Waseca allocates 100 percent of its margins (revenue less expenses) to its members who purchased electricity during the year, and retires (or pays back) those margins at a future date to those very members.

Instead of returning the profits, known as margins, to people or companies who had little or nothing to do with the generation of those margins, or who probably don't even live in the same region or state that you do, Steele-Waseca returns margins to those who actually buy and use our product. Steele-Waseca allocates and retires capital credits based on how much electricity you purchased during a year.

Where does the money come from? Member-owned, not-for-profit electric co-ops set rates to generate enough funds to pay operating costs, make payments on any loans, and provide an emergency reserve. At the end of each year, the co-op subtracts operating expenses from operating revenue collected during the year. The balance is called an operating "margin."

Can we get our retirement of capital credits sooner? Steele-Waseca currently has an equity-to-assets ratio of 45 percent. The board of directors has the responsibility of balancing the amount of equity with the cost of debt, and therefore, the amount of capital credit retirements each year. The higher the equity we maintain, the lower the debt, and the less we have retired in capital credits. However, the cost of our debt is one of the major components in our rates. Most co-ops attempt to maintain an equity ratio between 30 and 50 percent, and Steele-Waseca is well within that level. Our overall objective is to reward both past and current ratepayers with a balanced approach by retiring past and current capital credits each year, and maintaining the most manageable level of debt possible.

At Steele-Waseca, the board of directors make a decision in the fall of each year to retire capital credits. The co-op has retired \$14.9 million in capital credits to its members since 1966.

I did not get electric service from Steele-Waseca during 1988, 1989 or 2015. Will I get any retirement? No. This year capital credit retirements are only being made to members who purchased electricity from Steele-Waseca in 1988, 1989 and/or 2015.

How will the retirement of capital credit equity work? Inactive or former members who no longer purchase electricity from Steele-Waseca (but who purchased electricity during the years being retired) will receive a check. Due to the expense involved in processing printed checks, current members eligible to receive capital credit equity will have that amount credited to their Steele-Waseca account on their bill coming in December 2016. 22723

What if I have moved? If you move or no longer have electric service with Steele-Waseca, it is important that you inform the cooperative of your current address so that future retirements may be properly mailed to you. If you purchased electricity during the years being retired, then you are entitled to a capital credit retirement, even if you move out of Steele-Waseca's service area. If Steele-Waseca has your current address, then the co-op will send your retirement check by mail.

If you have additional questions regarding your equity, please feel free to contact Steele-Waseca during regular business hours.

(Smart meter myths continued from Page 5)

are an unlikely and unprofitable target for hackers.

Finally, there are the myths surrounding smart meters and ill effects on health. These concerns state that having the radio-based smart meter is the equivalent to having a cell tower attached to the side of your home. Again, this is unfounded. Let's look at why. Number one is that they communicate intermittently

for as few as five minutes a day. These devices are regulated by the Federal Communications Commission (FCC), and their output is well below the levels this Federal agency sets. As one doctor observed, the radio waves emitted are more like those of a cordless phone or wireless router. Radio waves emitted by smart meters are much weaker and less frequent than other sources we use on a

daily basis. We will all benefit from the continued development of America's smart grid and can rest easy with the knowledge that the rumors surrounding radio-based smart meters don't hold water.

Steele-Waseca conducts town hall meeting in Owatonna

Over 70 members and spouses were in attendance for a Steele-Waseca Cooperative Electric town hall meeting, Oct. 25, at the Holiday Inn Hotel & Suites in Owatonna.

The members invited were from the southeastern part of District 1, northwest portions of Districts 4 and 6 and the southern half of Districts 7 and 8.

Steele-Waseca General Manager Syd Briggs was the lead presenter (see photo) and covered details regarding the National Rural Electric Cooperative Association's (NRECA's) vote.coop website designed to promote rural electric cooperative member participation on Election Day, and to learn more about the candidates and issues prior to voting.

Briggs explained how personal visits from co-op directors and management with state and federal legislators is important regarding issues impacting Steele-Waseca and its member-owners.

Board Director John Beal presented details regarding ACRE (Action Committee for Rural Electrification) and how participation supports elected officials

who approve legislation keeping electricity reliable and affordable for rural electric cooperatives.

The ACRE presentation prompted the following to join: Marsha Borwege, Medford; Ronelle Deschamp, Faribault; Tracy Herbst, Connie Kubista and Dave/Lois Nelson, all of Medford.

Briggs presented information regarding Steele-Waseca's commitment toward community involvement through the Washington, D.C. Youth Tour, the Co-ops Yes! leadership conference in Eau Claire, Wis., and the annual bus tour to Coal Creek Station in North Dakota. 21006

Town hall attendees were also informed on the co-op's security light program and how changes are coming to Steele-Waseca's website for a more user-friendly experience with mobile devices. Attendees questioned Briggs on the water heater program, The Sunna Project, community solar and what

percentage of Steele-Waseca's power comes from natural gas generation.

Steele-Waseca conducted a town hall meeting in Lonsdale on Nov. 10. Details will be presented in next month's *Sparks* newsletter. The next round of town hall meetings will then be conducted in early Spring 2017. Specific dates and locations have yet to be finalized. Members are notified by a postcard mailed to their billing address, and a phone call through Steele-Waseca's automated phone messaging system to the number listed on the member's account.

Statement of Nondiscrimination

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (e.g., Braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720-2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877-8339. Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD-3027, found online at http://www.ascr.usda.gov/complaint_filing_cust.html and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by:

(1) mail: U.S. Department of Agriculture
Office of the Assistant Secretary for Civil Rights
1400 Independence Avenue, SW
Washington, D.C. 20250-9410;

(2) fax: (202) 690-7442; or

(3) email: program.intake@usda.gov.

This institution is an equal opportunity provider.

Sparks Free Classified Ad Form for all SWCE Members

Ads need to be received in our office by **December 5** to ensure being printed in the January *Sparks*. **Please print neatly or type** your ad of **20 words or less** on this form. We reserve the right to edit ad copy to allow space for more ads. Ads received after the 5th will be printed in the February issue.

Crab Salad

Ruth Kruger

Hayfield

- | | |
|---------------------------------|--------------------------------|
| 12 oz. frozen crabmeat | 1 c. chopped celery |
| 16 oz. shell macaroni | 1 c. chopped onion |
| 1 1/2 c. American cheese, diced | 1 c. Cool Whip whipped topping |
| 3 c. Miracle Whip dressing | |
- Optional: black olives, green peppers

Cut thawed crab into bite-size pieces. Mix Cool Whip and Miracle Whip. Combine all ingredients. Makes enough to fill 5-quart ice cream bucket.

Please use a 3 x 5 card when submitting your recipe. The member whose recipe is published will receive a \$7 energy credit.

Steele-Waseca Cooperative Electric's solar subscribers will see a 36 kWh credit per panel on this month's statement for energy generated during October 2016. Learn more about community solar and The Sunna Project by visiting Steele-Waseca's website, swce.coop. The latest subscriber is the Izaak Walton League's Owatonna chapter. 105820

Was your account number in Sparks?

Each month five account numbers are printed in *Sparks* and a total of \$35 in energy credits is divided among however many of those numbers are found. For example, if all numbers are found, a credit of \$7 will be applied to the members' following month's electric bills; or, if only one number is found, that member receives the full \$35 credit. Members finding their numbers who have a load management receiver on their dual fuel, electric water heater, air conditioner, or genset will receive an additional \$7 credit. When you find your number, phone our office no later than the 7th of the month following receipt of the *Sparks*, or the amount will be forfeited.

November issue of Sparks

Numbers found:
(None)

Numbers not found:
Jeri L. Blazek
Mr./Mrs. Donald J. Fried
George P./Joanne Klug
Eldean L. Proehl
Ronald C./Sharon K. Velzke

Busting the myths about "smart meters"

by Tom Tate, National Rural Electric Cooperative Association (NRECA)

By now, most Americans have likely heard of the "smart grid."

This phrase is being used to describe the computerization of America's electrical infrastructure. The purpose of this computerization is to improve the reliability, efficiency, resiliency and security of the electric grid.

A key component of the smart grid is an advanced metering infrastructure, also known as AMI (Advanced Metering Infrastructure) in the utility world. AMI systems utilize digital meters as well as computer technology to measure electric use at homes and businesses more precisely than was possible with analog meters.

The digital meters communicate via radio or the existing power lines and have been loosely termed as "smart meters." AMI benefits electric co-op members with greater accuracy in billing, faster outage restoration, operational savings versus manual meter reading and detailed data that you and your co-op can use to manage electric use much more accurately.

Unfortunately, a number of myths have developed over the years concerning smart meters. These myths can be classified into three categories: privacy concerns, security and health effects. Let's take a look at each, starting with privacy.

Steele-Waseca Cooperative Electric takes great pains to keep your information private—and that information includes the details of your electric use. The only people who see that data are co-op employees and you. Your co-op will not release this information to anyone else without your specific permission. The myths are that the data collected can tell when you are home or away and exactly what you are doing when you are there, and that this data is being given to the government. Naturally, the data will show when you are home because for most families, energy consumption is higher then. But having said that, the current smart meter cannot identify what activities are taking place down to the specific appliance in use. This myth is simply unfounded.

What about the myth that these meters actually make the electric grid less secure by providing an avenue for hackers to break into systems through the smart meter and wreak havoc? While

hackers continually attempt to break into electric systems, their focus is at higher levels in the operation. Hacking a meter is unlikely for a variety of reasons. Hackers like to work remotely via the internet, and smart meters don't offer that option. Radio-based smart meters require the hacker to be nearby to catch the weak communication signal, break the proprietary communication protocol and to be there for extended periods of time to collect the short burst of data sent. Therefore, smart meters

(Smart meter myths continued on Page 7)

MINNESOTA STRAY VOLTAGE GUIDE
A Guide Addressing Stray Voltage Concerns

In 2015, Minnesota developed a [Stray Voltage Guide](http://www.minnesotastrayvoltageguide.com) outlining the steps farmers, licensed electrical contractors, utilities and their advisors can take to discover and resolve stray voltage concerns on livestock farms. It is focused on dairy farms, but the processes and procedures are relevant to all types of livestock and livestock housing facilities. To download a copy, visit www.minnesotastrayvoltageguide.com. 21309

HOLIDAY LIGHTING SAFETY TIPS

Consider purchasing LED holiday lights; they are cool to the touch and more energy efficient than incandescent bulbs.

Test holiday lights by connecting each strand before hanging them.

Make sure there are no broken bulbs or damaged or frayed cords. Discard any defective strands.

Use holiday lights that include the Underwriter's Laboratories (UL) label.

Avoid resting bulbs on tree needles and branches. Try using a clip to keep the bulbs upright.

Do not overload electrical outlets or extension cords.

Turn off all indoor and outdoor holiday lighting before leaving the house or going to bed.
