

ENERGYWISE

for your Home

LED yard lights deliver more lumens per watt than more traditional yard lights.

LED YARD LIGHT (MEMBER-OWNED)

The residential LED yard light program provides a rebate for the installation of a new ENERGY STAR® or Design Lights Consortium (DLC) rated LED yard-light fixture for a residential, member-owned yard light. The program is intended to replace yard lights that are commonly run from dusk to dawn and controlled through photo sensors during daylight hours.

How do you benefit?

LED yard lights deliver more lumens per watt than more traditional yard lights such as Mercury Vapor, High Pressure Sodium and Metal Halide. Benefits of LED yard lights include more even distribution of light and reduced energy usage.

Rebate available

Residential cooperative members are eligible for a \$30 rebate for the LED fixture only (not the bulb) installed in the cooperative's service territory.

- Must be ENERGY STAR or DLC rated
- 50-100 watt LED replacements for High Pressure Sodium, Metal Halide, Mercury Vapor, or in new installations.
