### Beyond electricity—Great River Energy successful with fly ash business

As a member of Steele-Waseca Cooperative Electric, you use electricity every day at your home, farm, or business.

It charges your phone, powers your computer, lights your office, and powers your tools.

However, did you realize that you use many other things in life that come about as a result of byproducts from generating electricity?

Even the ash produced while generating electricity is put to good use. Known as “fly ash,” (because it “flies” out of the top of a power plant’s boiler) it is coveted by companies that make concrete. They are able to use this waste product to replace a portion of the cement in the concrete mix.

Fly ash particles are small and round, like tiny ball bearings. When fly ash is added to concrete, the particles not only fill in tiny spaces in the concrete, they also react with water and other compounds to form a powerful glue. The result is a concrete that is stronger and lasts longer. In other words, it’s a value-added product that users demand.

Great River Energy’s (GRE’s) fly ash business recently hit a huge milestone in reaching \$100 million in combined revenue and savings since 1997.

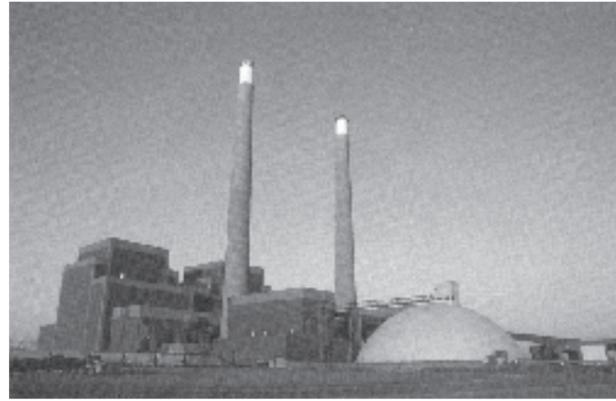

That year, GRE decided to make fly ash beneficial use efforts into a business by selling it into the concrete market.

In doing so, GRE not only generated revenue for its cooperative members (GRE is the wholesale energy provider for Steele-Waseca and its legacy members), but also saved money by avoiding landfill costs.

“Every dollar we save or generate goes back to our cooperative members—we always keep that in mind with everything we do,” said Al Christianson, GRE’s director of business development and government affairs.

Fly ash is used in concrete patio pavers, driveways, highways, and was used for the Twins and Vikings stadiums. Using fly ash also keeps power costs down, relieves the burden on landfills, and prevents emissions associated with the creation of cement.

Last year, with the addition of a favorable revised fly ash marketing contract, Great River Energy sold approximately

Fly ash collected at Coal Creek Station near Underwood, North Dakota, is stored in a dome (pictured at right) before it is sold for beneficial use. (Photo courtesy of Great River Energy)

350,000 tons of fly ash. This generated approximately \$5.5 million in revenue, and avoided over \$3.8 million in landfill costs, which pushed the total impact to more than \$100 million.

As fly ash is often used in concrete to displace Portland cement, GRE has also prevented the production of 5.8 million tons of carbon dioxide that would have been created had ash not been used instead. This is equivalent to the amount of carbon dioxide emitted by 121,000 vehicles annually.

Using waste products like fly ash has economic and environmental benefits. And that’s in addition to the generation of electricity people rely upon every day.

## 16th Annual Meatball Dinner

Sunday, April 29, 2018  
11 a.m. - 1 p.m.

Community Lutheran Church  
106 3rd St. SE, Geneva, MN

Everyone Welcome!!!

Serving: meatballs, mashed potatoes & gravy, corn, coleslaw, relishes, rolls, and pie.

Free Will Donation

\$1 Raffle Tickets available to win a beautiful homemade quilt

Worship Service at 9:30 a.m.

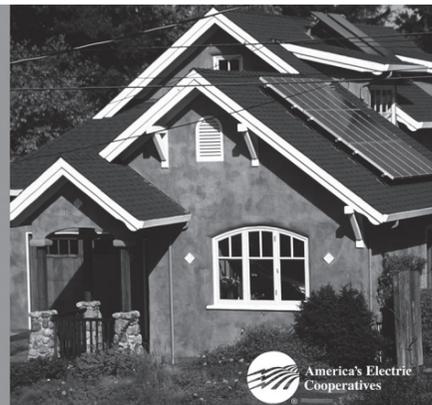

### Will Solar Panels Work for You?

• Solar panels work best when your roof faces south.

• If your roof receives a fair amount of shade, solar panels are not a good option for renewable energy.

• Your roof must be able to support the weight of solar panels, plus the weight of other loads, such as wind and snow.

There are many factors to consider before installing solar panels on your roof, so talk to the energy experts at your local electric co-op first.

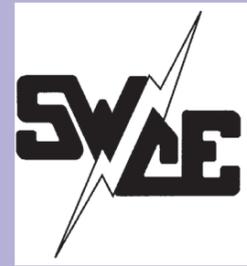

### Is my off peak/dual fuel being controlled today?

### Steele-Waseca Cooperative Electric Nominating Committee announces 2018 board director candidates

The Nominating Committee for Steele-Waseca Cooperative Electric has announced their selection of candidates for the board of director seats up for election in Districts 1, 3, and 5 at this year’s annual meeting, Tuesday, June 5.

The committee met on Nov. 16, 2017, at Steele-Waseca’s headquarters in Owatonna. General Manager Syd Briggs reviewed the duties of the Nominating Committee as stated in the bylaws. He also discussed in detail policies regarding the activities and conduct of individual board members, and the qualifications for eligibility for service on the board.

Cooperative Board President Gary Wilson highlighted areas of the board of director position description with the committee. He also talked about potential questions a candidate may have, highlighting the time commitment it takes to be a board director.

Briggs reviewed the selection process with the committee. He also explained the nominating committee policy and the rotation plan for the Nominating Committee of always keeping six experienced members on the committee, and adding three new members each year.

A list of members in each district was handed out and reviewed. It was suggested the committee members from each district meet together to search for candidates and review the information given to them.

Committee member Diane Stenzel was nominated and approved by the committee to serve as nominating committee chairperson and report to the Steele-Waseca members in attendance for the annual meeting.

The Nominating Committee conducted their second meeting, Jan. 23, at the

co-op’s headquarters in Owatonna.

Cooperative Attorney Eric Mattison reviewed the director duties, Standard of Conduct Policy, and the Qualifications for Eligibility for Service on the Board of Directors Policy.

Wilson reviewed the director position description; highlighting director responsibilities, board-manager relations, board-cooperative member relations, and board-community relations.

The Nominating Committee announced the following candidates will be on the election ballot for Steele-Waseca’s 82nd annual meeting, June 5, 2018, at the cooperative’s headquarters located at 2411 West Bridge Street in Owatonna. 20009

• **District 1:** Incumbent Patrick J. Duchene, Faribault.

• **District 3:** Incumbent Duane R. Edwardson, Ellendale.

• **District 5:** Incumbent Rodney D. Krell, Blooming Prairie.

A profile of each candidate will appear in the May 2018 *Sparks* newsletter. Additional candidates may be nominated from the floor during the annual meeting with nominations closing at that time.

This year’s Nominating Committee consisted of the following Steele-Waseca members: District 1—Wayne/Mae Maas, Faribault; Jerome/Diane Stenzel, New Richland; and Peter Rohe, Faribault; District 3—Bert Wiersma, Ellendale; Pete/Melissa Bauer, Nerstrand; and Kendall/Laura Strawmatt, Owatonna; District 5—Ben Sunde, Blooming Prairie; Jane Middlestadt, Owatonna; and Guy/Barb Jarvi, Webster. 

Steele-Waseca is conducting auditions for the singing of, “The Star-Spangled Banner,” at this year’s annual meeting. Contact Jenifer Shimpach at SWCE for more information.

## manager connection

By Syd Briggs,  
General Manager

At the writing of this month's message, we just received another seven inches of snow with wind gusts up to 40 miles per hour. However, the temperature indicates that spring is just around the corner. With the arrival of spring, we can look forward to showers to clean up the remnants of winter, and enjoy the greening of the grass and trees.

It also could be the beginning of a potentially stormy season that can inherently include power outages. While Steele-Waseca Cooperative Electric strives to provide reliable electricity to our members, there are times when Mother Nature has other plans. Most of us can ride out a storm from the comfort and convenience of our homes. However, there is a group of professionals that spring into action when the weather takes a turn for the worst—co-op line technicians.

Braving stormy weather and other challenging conditions, lineworkers often must work 40 or more feet in the air. Listed as one of the 10 most dangerous jobs in the U.S., line technicians must perform detailed tasks next to high voltage power lines.

To help keep them safe, lineworkers wear specialized protective clothing and equipment at all times when on the job. This includes special fire-resistant clothing that will self-extinguish, limiting potential injuries from burns and sparks. Insulated and rubber gloves are worn in tandem to protect them from electrical shock. While the gear performs a critical function, it also adds additional

weight and bulk, making the job more complex.

In addition to the highly visible tasks line technicians perform, their job today goes far beyond climbing to the top of a pole to repair a wire. They are also information experts that can pinpoint an outage from miles away and restore power remotely.

Line crews have developed over the years working with many software applications on laptops, cellphones, and computers as they map outages, submit pictures of before and after, research solutions, and troubleshoot problems. In our service area, Steele-Waseca line technicians are responsible for keeping over 2,200 miles of lines across a nine-county area working, in order to bring power to your home and community 24/7, regardless of the weather, holidays, or personal considerations.

While April is known for "spring showers that bring May flowers," there is also a day set aside to "thank a lineworker."

Lineworker Appreciation Day is recognized by the National Rural Electric Cooperative Association (NRECA) on the second Monday in April. This year's recognition is April 9. If you see a lineworker, please pause to say "thank you" to the power behind your power. Let them know you appreciate the hard work they do to keep the lights on—regardless of the conditions. 25455

Steele-Waseca depends on our entire staff to keep the cooperative running smoothly, but the co-op's line technicians repair damaged lines and maintain critical infrastructure for our member-owners. Without their hard work and commitment to the job, our co-op would not thrive. I am proud of the hard work and commitment our line crew has for their job and responsibilities. Our line technicians love their job and it shows in their

good nature and great attitude they bring to work every day.

*Syd*

## SEAL AIR LEAKS WITH CAULK

Did you know heating and cooling accounts for roughly **HALF OF YOUR HOME'S ENERGY USE**? Caulking cracks and gaps around windows, doors and spaces around wires (telephone, electrical, cable and gas lines), water spigots and dryer vents can pay off with **BIG ENERGY SAVINGS**.

\*Approximate cost: \$5-\$30 \*Energy savings: Approx. 5-10 percent - Source: U.S. Dept. of Energy

1

### MATERIALS YOU WILL NEED

- Caulk • Caulk gun • Knife or tool to cut • Rags • Water

**1. PREP** Clean the area where you will be applying the caulk. Remove any dirt, loose paint or old, cracked caulk.

Be sure the area is dry before applying new caulk appropriate for your application.

**2. LOAD** You will need to pull the plunger all the way back to load the tube of caulk into the barrel of the caulking gun.

Next, squeeze the trigger a few times until the plunger makes contact with the tube. Squeeze once or twice more to fill the tip with caulk.

**3. APPLY** To figure out the right amount of caulk needed, experiment with an out-of-the-way section. You may find that you need less caulk than you thought.

Hold the gun at a slight angle. Apply steady pressure on the trigger to create a solid stream from the tip, which should be placed 1/2 inch or less from the intended destination of the material.

Use just enough caulk to do the job. Use your finger to gently press the caulk into the corner, crack or space.

**4. RELEASE** Once the trigger is fully depressed, allow it to spring back and depress it again. Keep the gun moving while caulk is still coming out of the tip.

**5. CLEAN** Use a damp cloth or rag to clean off most of the excess caulk. Use a dry cloth to clean off the rest.

## cookin' connection Apple Oven Pancake

Joyce Cordes

Faribault

2 or 3 apples peeled, cored & sliced  
1/4 c. brown sugar  
3 large eggs  
3/4 tsp. cinnamon  
3/4 c. milk  
3/4 c. flour  
1 tsp. vanilla  
1/4 tsp. salt  
3 tbsp. butter (melted)

Heat oven to 425°. Put an oven-proof 9 or 10" skillet in oven. In a bowl combine the apple slices with brown sugar and cinnamon. Toss gently to coat well. In another bowl, mix flour and salt. In a large cup, whisk together eggs, milk, vanilla, and 1-tbsp of melted butter. Whisk in flour mixture. Take pan from oven and add rest of batter. Swirl to coat the bottom of pan. Arrange apple slices over bottom of pan. Pour batter over apple slices. Bake for 25 to 30 minutes until cooked and lightly browned. Enjoy plain or with powdered sugar, honey, or syrup.

Please use a 3 x 5 card when submitting your recipe. The member whose recipe is published will receive a \$7 energy credit.

Steele-Waseca Cooperative Electric's solar subscribers will see a 26 kWh credit per panel on this month's statement for energy generated during February 2018. The latest member to subscribe is Ron Gilthvedt of Owatonna. Learn more about community solar and The Sunna Project by visiting Steele-Waseca's website, [swce.coop](http://swce.coop).

## Was your account number in Sparks?

Each month five account numbers are printed in *Sparks* and a total of \$35 in energy credits is divided among however many of those numbers are found. For example, if all numbers are found, a credit of \$7 will be applied to the members' following month's electric bills; or, if only one number is found, that member receives the full \$35 credit. Members finding their numbers who have a load management receiver on their dual fuel, electric water heater, air conditioner, or genset will receive an additional \$7 credit. When you find your number, phone our office no later than the 7th of the month following receipt of the *Sparks*, or the amount will be forfeited. 30246

## March issue of Sparks

**Numbers found:**  
Terry Probst  
**Numbers not found:**  
Ruth Ann Borchert  
Kubes Custom Cabinets  
Katherine/Russell Franek  
Michael/Jan Guse

## Sparks in brief . . .

• **Want easy energy payments?** Sign up for **EnergyPay Plus**, our automatic payment plan, or **Energy Prepay**, our discounted advance payment plan. Contact our office for details. You may also pay your bill online at [www.swce.coop](http://www.swce.coop). By entering your Steele-Waseca username and password you can also view a 13-month history of your account.

• **If you have changed or added phone numbers**, please contact SWCE to update your contact information.

• **Need a new water heater?** For information about our Westinghouse Electric Water Heater Program, phone Cindy Butterfield at our office between 8 a.m.-3:30 p.m., 446-4204 / 800-526-3514.

• **February temps** – The average high temperature for February was 23° F, while the average low was 3° F. They compare to last year's average high of 39° F and average low of 22° F.

• **ENERGY STAR® Rebates** – In 2018, all ENERGY STAR refrigerators/freezers (with recycling), electric clothes dryers, dehumidifiers, central air conditioners, air and ground source heat pumps, light emitting diode (LED) holiday lights and bulbs purchased are eligible to receive rebates (may not be combined with special promotions). Rebate request forms must be submitted within 90 days of purchase. Rebate forms are available at [www.swce.coop](http://www.swce.coop). For more information or to receive a rebate request form, phone Cindy Butterfield at 446-4204 or 800-526-3514.

• **Steele-Waseca's tree service contractor** – Carr's Tree Service, Inc., is contracted to do SWCE's tree trimming. To report a tree concern, phone:

**507-451-7340 / 800-526-3514**

### LIVESTOCK OWNERS

If you have questions or concerns regarding stray voltage in your livestock confinement building(s), or are planning an addition, or constructing a new one, call Steele-Waseca at 507-451-7340 or 800-526-3514. Steele-Waseca will work with you and your electrician to eliminate potential stray voltage problems. You may also visit: [www.minnesotastrayvoltageguide.com](http://www.minnesotastrayvoltageguide.com).

## health & safety connection

### How to comply with Minnesota law when you plan for projects that require digging

National Safe Digging Month recognized during April

Whether you plan to dig posts for a deck, plant a tree, or trench in electric lines for an outbuilding, it is important to understand, utilize, and comply with Gopher State One Call (GSOC) before starting your project.

The GSOC system is designed to notify utilities, in accordance with state law, who may have underground facilities in the area where digging is planned. That call needs to be made at least 48 hours (excluding weekends and holidays) before you plan to dig. **If a homeowner hires a contractor to do the work, then by law the contractor must obtain the ticket that allows digging to proceed.**

The type of information GSOC will need when you submit a ticket to locate whether by phone, or online at [gopherstateonecall.org](http://gopherstateonecall.org), includes your telephone number, your name (do not submit a ticket under someone else's name), mailing address, email address, alternate contact name and phone number, type of work, duration of work, if explosives are being used for excavation, tunneling and/or boring (also known as trenchless construction), right of way (note the ROW is not the same as an easement), area marked (white paint or flags), street address of work site including city/township name and county name, nearest intersecting street, and any additional marking instructions.

**GSOC will not locate private facilities, which means the homeowner is responsible for hiring a qualified professional to locate their private underground facilities, which comes with a cost to the homeowner.** Private underground facilities are those installed behind or after the meter. Also,

**Know what's below.  
Call before you dig.**

if overhead distribution lines serve the property and the power is distributed by underground service facilities, those facilities may be considered private. If a homeowner's electric meter is located on the property line, then the electric line from the meter to the house is considered privately owned and will not be located.

**Steele-Waseca Cooperative Electric does not locate buried wires that are the homeowner's responsibility. The homeowner will need to hire and pay a private locator to determine the location of those buried wires.** 136620

A list of private locators are available at [gopherstateonecall.org](http://gopherstateonecall.org). Move your cursor over the "ABOUT US" tab on the home page, click on "Industry Directory," and "PRIVATE FACILITY LOCATORS." This list is by no means an exhaustive list or a list of locators recommended by GSOC. For additional locators, consult a search engine like Google or the Yellow Pages under "Utilities Underground - Locating." **Remember, private locators will charge a fee for their services.**

Examples of other private facilities include: natural gas farm taps, natural gas or propane gas underground piping to buildings, private water systems, data communication lines, and invisible fences.

**No one should ever remove flags before work is completed for the safety of all digging in the area. If you**

### Lienkes meet Howard Wasdin

Steele-Waseca Cooperative Electric Board Director Gerri Lienke and her husband, David, were able to meet and talk with Navy Seal and Author Howard Wasdin (middle), Feb. 27, at the Touchstone Energy booth during the National Rural Electric Cooperative Association Annual Meeting in Nashville, Tennessee. Wasdin was one of the keynote speakers at the meeting. (Photo courtesy of NRECA)

## Be Safe Always call before you dig

**CALL 811  
BEFORE  
YOU DIG.  
IT'S THE  
LAW.**

**UNDERGROUND POWER LINES** can be just as dangerous as overhead power lines. Avoid serious injury and property damage by calling 811 before you dig to have underground facilities marked.

- Call Gopher State One Call at 811 at least two business days prior to a dig.
- Dial 811 or 1-800-252-1166 during normal business hours; this service is free for homeowners.
- Minnesota state law requires you to call.
- If you damage a line, you may be financially responsible for repairs.

You may also submit your dig information at [gopherstateonecall.org/submit](http://gopherstateonecall.org/submit).

come in contact with an underground utility, evacuate the area and notify your utility provider.
